REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Brownlow et al (US Patent No. 6,064,362), Ruta (US Patent No. 6,075,524), Akiyama (US Patent No. 6,278,426), Shih et al (US Patent No. 6,469,562), Takeshita (US Patent No. 6,850,100), and Kimura (US Patent No. 7,138,967) are made of record for teaching of driving circuits of a panel display including capacitors, transistors, and amplifiers. However, the prior art of record fails to teach a buffer circuit comprising: a first transistor and a second transistor, wherein the first transistor further comprising a gate connectable to an input signal, a first electrode coupled to a first power supply, and a second electrode connectable to a second power supply; the second transistor further comprising a gate coupled to the second electrode of the first transistor, a first electrode connectable to the first power supply, and a second electrode connectable to the second power supply; a first capacitor being connectable to the input signal storing a voltage of the input signal when connected to the input signal, and providing a first voltage to the gate of the first transistor when disconnected from the input signal; a second capacitor further comprising a terminal coupled to the second electrode of the first transistor and the gate of the second transistor providing a second voltage at the terminal when the first transistor is turned on; and a third capacitor coupled to the first electrode of the second transistor providing a third voltage when the second transistor is turned on; wherein the second voltage further comprises a first offset including a gate to source voltage of the first transistor, and the third voltage further comprises a second offset including a gate to source voltage of the second transistor.
